

SOP: Developer Testing Responsibility

Objective:

Ensure zero critical defects during internal testing

1. General Testing Responsibilities (Mandatory for All Developers)

- Complete feature implementation as per approved requirements
- No known bugs or incomplete flows
- No dummy data, test credentials, or debug logs in production/stage build.
- Application tested on **multiple devices, screen sizes, and browsers**
- Proper versioning and correct environment deployment
- Proper versioning (App Version, Build Number, Environment tagging)
- Code pushed and merged to the correct branch
- Deployment verified on the target environment (Stage / Production as applicable)

2. Mobile Application Testing Checklist

Installation & Launch:

- App installs and launches without crash
- App installs without error (Fresh install & update)
- App opens without crash
- Splash screen, app icon, and app name are correct
- Proper handling of no-internet and low-network scenarios
- Correct app icon, name, and splash screen

Authentication:

- Login, OTP, logout, session handling
- Login (Mobile / Email / OTP) works correctly
- Invalid credentials show proper error messages
- OTP generation, expiry, and resend functionality works
- Logout works and clears session correctly
- Session timeout handled properly

Profile & Data:

- Profile update, image upload, data persistence
- Profile view/edit/update works
- Mandatory fields validation enforced
- Data persists after logout/login
- Image upload (camera/gallery) works correctly
- No exposure of restricted data (e.g., mobile number visibility rules)

Core Features & Modules:

- End-to-end testing of all modules end-to-end (Create → View → Edit → Delete)
- No broken navigation or blank screens
- All buttons, CTAs, and navigation flows work
- Correct data mapping between mobile app and backend
- No blank screens or broken navigation
- Edge cases tested (empty state, max limits, invalid inputs)

Forms & Validation:

- Mandatory fields, error handling
- Required fields validation
- Character limits enforced
- Correct error messages shown
- No duplicate submissions on multiple clicks

Payments:

- Success, failure, Refund, Cancel scenarios
- Payment gateway opens correctly
- Success, failure, and cancel scenarios handled
- Transaction status reflected correctly in app and admin panel
- Screenshot upload / confirmation flow verified

Notifications & Permissions:

- Push notifications and permission handling
- Notification redirection works
- Permission handling (Camera, Storage, Location) works gracefully
- App does not crash if permission is denied

Performance:

- Stability, load time, poor network handling
- No app crash during normal usage
- Smooth scrolling and transitions
- Acceptable load time for APIs
- Tested under poor network condition.

3. Web/Admin Panel Testing Checklist (Developer-Level)

Login & Access:

- Admin login, role-based access
- Invalid credentials handled properly
- Role-based access verified
- Unauthorized access restricted

Dashboard:

- Navigation and redirection
- Dashboard loads without errors
- All menus and sub-menus clickable
- Correct redirection to respective pages
- No broken links

CRUD Operations:

- Create, view, edit, delete for all modules
- View details
- Delete / Active / Inactive record
- Data reflected correctly on frontend/mobile app

Forms & Validation:

- Field validation and error messages
- Incorrect data handling
- Duplicate entry prevention
- Correct success and error messages

Data Sync:

- Consistency with mobile app
- Data consistency between Admin Panel and Mobile App
- Real-time or near-real-time sync verified
- No data mismatch or stale data issues

Reports:

- Filters, exports.
- Reports load with correct data
- Filters work correctly
- Export (PDF / Excel / CSV) works
- Date range and search functionality verified

Media:

- Upload, preview, validation
- Image/video upload works
- Proper preview and rendering

- File size and format validation
- No broken media links

Security:

- Session timeout, error handling
- No exposed APIs or sensitive data
- Session timeout works correctly
- Admin panel does not crash on invalid actions
- Error handling pages displayed properly

4. Mandatory Pre-Submission Checklist

NOTE: Before approaching **Rushi / Client for Testing**, the developer must confirm:

- All assign modules tested
- No pending bugs
- Admin & App verified on both the side
- Build is stable and deploy-ready

5. Red Flag Rule (Strictly Enforced)

Rule Definition

- If a developer/team submits an application for testing and **bugs are identified**, it will result in a **Red Flag**.

Red Flag Conditions

- **1st Time:** Bug found during review by Rushi Sir → **1 Red Flag**
- **2nd Time:** Bugs found again after re-submission by Rushi Sir → **2nd Red Flag**
- **3rd Time:** Bugs found again by Rushi Sir → **3rd Red Flag**

Penalty Policy

On accumulation of 3 Red Flags:

- Issue will be formally reported to HR
- 1 full day salary deduction will be applied
- Entry will be recorded in performance/compliance records

Note: The same rule applies for **both Mobile App and Admin Panel testing failures**.

6. Accountability Statement

- Unit Testing and re-testing the whole application is the developer's responsibility.
Not the managements.

NOTE:

- Every time do Re-testing and Regression of the Mobile and Admin Panel App
- Do performance testing of every pages.
- Every time do UAT (User Acceptance Testing)
